25X1A

- Approach Vessel approached from seaward steering 171° true on course line marked by designator A.
- Anchorage An anchorage point is located about 500 yards off the entrance to the port at designator B. Another anchorage is situated at point D. Source's vessel anchored at point D, inasmuch as they had transited port after sunset and pilot would not proceed any further. The anchorage at Point D was small in area, had good holding ground in about 24' of water.
- 8. Pilotage Pilot boarded vessel at point B and conducted her to point D, where she anchored. Vessel was met by a 10 meter, wooden, Diesel, low-powered pilot boat showing the "How" flag. Pilot boat had a beam of about three meters. Pilot spoke German and Polish but no English. Inasmuch as pilot would not take the vessel in to Stettin at night he departed at anchorage point described in paragraph 7 above. At 1000 the following morning, pilot again boarded and conducted the vessel to Stettin. Pilots were described as being quite satisfactory, performing their duties with adeptness.
- 9 Channel depth Average depth of water over the course passed was 24.
- Traffic Restrictions When tankers are underway in the channel out of Stettin all incoming shipping is halted at Swinemunde.
- 11. Shipping Observed Three merchant vessels were observed standing out of port upon source's srrival and upon departure 28 Sep 53, 10 more were sighted waiting to enter.
- 12. Patrol Station A Polish harbor police patrol station is located at point C.
- 13. Coastal Defense Battery In response to questions regarding subject port, source stated a radar controlled coastal defense battery is located at designator E. This battery, thought to be an old Cerman installation, is arranged in single mounts with slit trenches connecting. Ordernce consisted of four guns of 8.8 cm barrel diameter and three guns of 21 cm barrel diameter.
- 24. Fire Control Radar The coastal defense battery described in paragraph 13 was accompanied by fire control radar with antennas mounted on each gun. The antenna consisted of parabolic reflectors with diapoles in the center.
- 15. Navai Factivies A naval facility and docking area is located on either side of the channel near the entrance to the port. At designator F is located a berthing area for Soviet naval vessels and designator G a berthing area for Polish naval vessels.
- Soviet Maval Vessels Sighted Berthed at dusignator F were three Soviet destroyer. They were described as small, one funnel, single-mast craft, having a mattress type radar reflector untenna and two 12.7 cm main battery guns mounted in single enclosures fore and aft. They were not positively identified but appeared to resemble AMC No 105, the KRONSTADT class, more than other types. Also berthed at designator F were about 20 Soviet PT boats described as having two torpedo tubes, flying bridge and two small caliber automatic guns aft. They were identified as members of the VOSFER class.
- 17. Polish Maval Vessels Sighted At designator G a very old Polish AMS type vessel was berthed. This was believed to be an ex-German craft.
- 18. States of Maval Units Both Polish and Soviet vessels were observed to be fully operational and were believed to be frequently employed. Their general condition was fair, though some hull plates showed minor signs of wear and buckling. Personnel abourd were thought to be in excess of normal complements and appeared to superabound on vessels sighted.
